

A. Model A: Scalar Entropy Readout ($RT_{\hat{}} = RT_{base} + \kappa \cdot S_t$)

Overall RMSE = 0.5168s | Post-Pause ($\tau=+1$) RMSE = 0.5780s

B. Model B: High-Dimensional Ridge Readout ($RT_{\hat{}} = RT_{base} + w \cdot S_t$)

Overall RMSE = 0.5167s | Post-Pause ($\tau=+1$) RMSE = 0.5778s (Ridge Superiority)

● Standard Trial ▲ Post-Pause ($\tau = +1$)
